

## LearnPad - Using Your Existing Curriculum & Instructional Materials

We know new Apps are powerful, easy and engaging. But, in addition to making those downloads simple, the LearnPad allows you to utilize all your existing digital materials. Being Purpose Built for Education means that our solution needs to support and enhance your standards-based instruction. The LearnPad allows immediate, easy, out-of-the-box access to all "your" existing digital content and interactive materials.

### Access & use Flash-based Content

One of the key limitations of the iPad for schools is its lack of support for Adobe Flash. 95% of the curriculum content schools use is written in Flash, and as such will not run on the iPad. LearnPad is built on Google's Android operating system, which natively supports Flash activities and content, including websites and content from great publishers. LearnPad allows you to bring the engagement and excitement of touch screen to your existing curriculum content.

### Application & Content Delivery

As well as centrally managing LearnPads, the portal has a custom designed content delivery system, allowing teachers or network managers to upload, store and automatically deliver new applications and content directly to individual or grouped LearnPads, all from one central location. Send your own documents, videos or flash content directly to LearnPad, safely and securely from a central portal. Managing and delivering content to multiple devices has never been so easy.

### Connect to Network Shares

iPad's restrict access to network share drives based on their simple, consumer-based design. Implementing existing lesson plans, scope and sequence documents and curriculum frameworks shared across schools and a district via the school network is a must for supporting your standards-based instruction. Through the teacher directed management console, and directly on the LearnPad, you can effortlessly enable network shares to ensure instruction remains on-target, and on pace.

### Existing Web Based Programs

Teachers, Curriculum Coordinators and Instructional Technologists have been engaging students for years with interactive materials accessible directly from the web. LearnPad's ER EdSafe Browser allows for immediate use of these important instructional resources without any special permissions, simply directed and controlled by the teacher.

### Download Educational Apps

More than 1/2 million Android based Apps are currently available\* with incredible growth in Apps for student engagement and learning concept mastery. The LearnPad cloud based management console allows a teacher instant, controlled access to enable Apps for targeted delivery to all or select students. The LearnPad App store provides for a secure assembly to customize, organize and filter. (\* as of 10.12.12)

### Use any Digital Textbooks

Schools have encouraged their textbook providers to offer companion digital supplements to increase convenience, efficiency and access to learning anywhere. The LearnPad, out of the box, comes with the most robust LearnPad Reader offering text to speech capabilities for special needs learners along with 5 native languages for LEP populations. Anytime, anywhere learning is effortless with the LearnPad's Productivity pack which is interoperable will all digital text formats offered by educational publishers.
