

What is LearnPad?

The LearnPad is the only proven "Purpose Built for Education" tablet solution. The LearnPad comes "out of the box" ready for use in schools and classrooms anywhere.

The LearnPad solution includes three components that allow any teacher or school to safely deliver unlimited, digital curriculum & instruction anywhere. The LearnPad tablet; the LearnPad cloud-based management portal; and the LearnPad content store.

The LearnPad tablet supports tablet "apps", websites and Flash based eLearning content. With the anytime, anywhere cloud based management portal, teachers and students have simple, classroom controls so videos, music, and documents can be used in a directed, instructionally sound manner. Perfect for schools piloting tablets by the classroom, deploying across core

teachers, or implementing campus wide. LearnPad easily supports existing network shares, so you can use the curriculum resources and files you already have in your school together with the curated education resources in the Content store.

The LearnPad carries no access, subscription, renewal or reoccurring costs beyond initial cost. No download, installation or network applications are necessary. LearnPad is recognized as a "BETT Best Digital Device Finalist" for 2013, brought to schools across the US exclusively by Educational Resources®

PRODUCT HIGHLIGHTS

Safe, Secure & Customizable Interface

LearnPad has a unique, secure and customizable student user interface that allows you to control which activities, applications and websites a student can use. This helps students remain focused on the activities you want them to run, and secures the device from accidental system setting changes. The ability for the teacher to easily create

QR keys that can be printed or displayed, allows the teachers to create topic based themes, turning the device into a unique learning tool. Changing the LearnPad from class to class, school to home, student to student is as simple as taking a picture.

Central Management

Deploying any number of devices in a school requires a system to manage and update them. LearnPad has been designed with schools in mind and as such comes complete with access to the LearnPad management portal, a cloud based solution for managing devices and deploying content and applications. Here you can silently roll out new apps and content to multiple LearnPads with a single click. You can monitor each device, check its battery charge level or Wi-Fi connection, even view how much storage space is available. There are no expensive servers or software to install and the device can be managed from anywhere you have internet access.

Application & Content Delivery

As well as centrally managing LearnPads, the portal has a custom designed content delivery system, allowing teachers or network managers to upload, store and automatically deliver new applications and content directly to individual or grouped LearnPads, all from one central

location. Custom content profiles like 'Class 2B' or topic based profiles such as 'Dinosaurs' or 'Space' can be teacher created for your classroom's needs. These profiles hold all of the applications and content for the LearnPads and once applied to a LearnPad, all of the content is downloaded and installed on the device automatically. Send your own documents, videos or flash content directly to LearnPad, safely and securely from a central portal. Managing and delivering content to multiple devices has never been so easy.

Content Suite & Education Store

LearnPad comes complete with a range of pre-installed content designed to meet specific areas of the teaching curriculum, across Foundation & Primary, Secondary and Special Educational Needs. A range of additional content is available

at our online content store, with many free applications and activities. LearnPad also supports existing eLearning content, including office documents, audio and video files, VLE content and, unlike the iPad, can run Flash-based resources and websites, from a range of well known publishers.

The LearnPad is only available through Educational Resources® and ER™ approved partners and resellers. **Call us today and you'll be using affordable tablets tomorrow!**

PRICING

SINGLE TABLET\$299.95 24-PACK.....\$7,199.95 30-PACK.....\$8,999.95
